

CASE STUDY

The Titanic sank in the Atlantic Ocean more than 100 years ago (1912). The number of passengers who were saved from her was very small. Recently we had started thinking about the sad day again. The Titanic, the longest and largest ship in the world, was thought by people at that time to be unsinkable. Yet when she hit an iceberg in dense fog, she actually disappeared in less than 20 minutes taking nearly 1200 people with her. However, some children and women were saved. They were lucky because according to custom, they were allowed to go first from the sinking ship.

Answer the following questions with the help of the above passage:

1. The Titanic is the name of _____.
a. A ship b. a novel c. an ocean
2. The Titanic sank in the Atlantic Ocean in _____.
